NEW AND REVISED AMPHIPOD TAXA IN AMPHIPOD NEWS LETTER 1-10

AN INDEX TO THE BIBLIOGRAPHY

II. SPECIES AND SUBSPECIES

George I. Crawford & Wim Vader

Introduction

This is the second part of the index which was promised when the first part (on genera and higher taxa) was issued. It is arranged on the same lines with lists, arranged in alphabetical order, of new species; subspecies newly raised to specific rank; and new subspecies. New species described but not named (of the type Gammarus sp. A) have not been included. The bibliography includes, for completeness, all papers which contain descriptions of the new taxa listed, including papers from the bibliography of Part I (1980). Entries consist of the specific (or subspecific) name; the genus or species of which this is a sub-taxon; the author's reference; the AN reference; and the type locality. The scope of the index has been extended to cover new taxa named in the papers abstracted in AN 1-10, whether or not the names of these taxa are recorded in the abstracts. This has involved a great deal of re-examination of the texts and has made the index far more complete - though not, of course, absolutely complete. In particular we expect a number of omissions in the list of infraspecific taxa raised to specific rank. We shall be grateful if such omissions are brought to our notice along with any other errors or omissions detected. We have tried to give the type locality area of each species or subspecies rather than its complete distributional range, but this has not always been possible.

NEW AND REVISED TAXA IN AMPHIPOD NEWSLETTER 1 - 10. AN INDEX TO THE
BIBLIOGRAPHY. III. SYSTEMATIC INDEX OF NEW SPECIES, INCLUDING SUB-SPECIES
NEWLY RAISED TO SPECIFIC RANK.

George I. Crawford & Wim Vader

Introduction with associated bibliography

1. New species, and subspecies newly raised to specific rank, are listed in alphabetical order of specific name in Part II of this index. These same species are here arranged in systematic order under genera, families and higher taxa. Subspecies newly raised to specific rank are entered in brackets; they will be found in a separate section of Part II. Subspecies, as such, are included in Part II but not in Part III.
2. The arrangement of families and higher taxa, apart from the Hyperiidea, follows the scheme in Table I on pp. 378, 379 of Bousfield 1978. (This scheme, though controversial, is the only currently available framework for the Amphipoda as a whole - apart from the Hyperiidea, where we follow Bowman and Gruner 1973.)
3. Genera are assigned to families as below:
 - (a) Bousfield 1978 is followed for Urothoidae (pp. 356, 357) and Pontoporeiidae (p.359).
 - (b) Bousfield 1977 is followed for the families contained in superfamilies Gammaroidea (pp. 290-296), Melitoidea (pp. 296-300), Crangonyctoidea (pp. 300-303), Niphargoidea (pp. 303-305), Bogidielloidea (pp. 305-307), Melphidippoidea (pp. 307-308), and the synopiid group of families.
 - (c) Part I of this index (Crawford and Vader 1980) is followed for genera there listed as new, unless they are otherwise assigned under (a) or (b) above.
 - (d) Barnard 1969 is followed for genera not assigned under (a), (b) or (c) above.
4. Within the family, genera are arranged in alphabetical order.
5. Genera described as new in AN 1-10, and so recorded in Crawford and Vader 1980, are marked with an asterisk.
6. Species are listed alphabetically under the genus to which they were assigned in the original papers abstracted in AN 1-10 (see part II of this index for bibliography and detailed information on each species).
